### Easy handling for convenient radiology exams

Agfa has put several years of experience with Direct Digital printing into designing the DRYSTAR 5x0x and DRYSTAR AXYS imagers, in order to produce the high diagnostic quality greyscale hardcopies. To support these top-of-the-line imagers, a special medium, DRYSTAR DT 2, was developed. It is capable of coping with the higher throughput of the advanced imagers.

Agfa's leading-edge Direct Digital dry imaging technology produces greyscale hardcopies with high Dmax and contrast. It gives the same clear, high-quality results as wet laser film, but offers all the advantages of dry technology. Superb quality images are generated more quickly and more conveniently.

### Ecological technology in an easy-to-use system

The Direct Digital dry imaging technology provides easy and convenient use. The heat-sensitive characteristics of DRYSTAR DT 2 make daylight loading effortless. Image processing is more efficient and cost-effective. The DRYSTAR DT 2 packaging is fully recyclable and, combined with the elimination of processing chemicals, provides a more environmentally friendly solution.

### Consistently clear and sharp images

DRYSTAR DT 2 is built on a 168µm-thick PET base, coated with silver salts and covered with a protective top layer for resistance to scratches and moisture. The PET base has rounded corners, to allow the medium to be handled in the same way as regular X-ray film. The silver-based imaging layer is heat-sensitive rather than light-sensitive, providing low fog and high contrast, combined with excellent image stability.
