About this Conformance Profile

HL7Server_TT - Release 2005.3.1 - Conformance profile ORU inbound from 3rd party reporting systems. (e.g. Talkstation, Dictaphone, G2Speech, MRS)

History:

2007-10-24 - Creation - Nico Vannieuwenhuyze

Remarks:

When messages are received via HL7 MLLP (socket) HL7Server_TT processes the message before sending an acknowledgement message.

For certain events this can take a few seconds, so please configure the sending application to wait eg 180 seconds for an acknowledgment.

For more information on HL7 conformance profiles please consult HL7 ANSI standard chapter 2 and HL7 Implementation/Conformance Technical Committee documents at <http://www.hl7.org/special/committees/ictc/docs.cfm>

1. Field Separator

This field contains the separator between the segment ID and the first real field, MSH-2- encoding characters. As such it serves as the separator and defines the character to be used as a separator for the rest of the message. Recommended value and used by Agfa is |, (ASCII 124).

2. Encoding Characters

This field contains the four characters in the following order: the component separator, repetition separator, escape character, and subcomponent separator. Recommended values and used by Agfa Healthcare are ^~\&, (ASCII 94, 126, 92, and 38).

3. Sending Application

This field uniquely identifies the sending application among all other applications within the network enterprise. The network enterprise consists of all those applications that participate in the exchange of HL7 messages within the enterprise. Entirely site-defined and a parameter for Agfa.

7. Date/Time Of Message

This field contains the date/time that the sending system created the message. If the time zone is specified, it is expected to be the local time zone !

9.3. message structure

Only used/required when the message is hl7 v2.xml encoded

10. Message Control ID

This field contains a number or other identifier that uniquely identifies the message. The receiving system echoes this ID back to the sending system in the Message acknowledgment segment (MSA).

11.1. processing ID

No difference in processing by HL7SERVER5 if Production or Test

12.1. version ID

Versions supported by HL7SERVER5 are 2.2, 2.3, 2.3.1, 2.4

18. Character Set

Character set has to be a subset of the Windows ANSI codepage of the pc where HL7SERVER5 is running ! e.g. ISO 8859/1 on a windows 1252 code page UTF-8 is not supported !

3. Diagnosis Code - DG1

ICD9-CM and ICD10-CM supported ! codes should have been preloaded in Agfa database

3.3. name of coding system

Coding systems I9C and I10C are supported

CTD - Contact Data

- Usage: Not supported

Segment group: OBSERVATION

- Usage: Required

- Cardinality: 1..*

OBX - Observation/Result

- Usage: Required but may be empty

- Cardinality: 0..1

11	Observation Result Status	ID	HL70085	1	O	0..1	e.g. F

2. Value Type

Supported values: TX, FT, RP

3. Observation Identifier

Procedure. In case of multiple procedures in one report - put the procedure code from the last OBR segment in this field.

3.1. identifier

Procedure code & observation sub id (e.g. CXR&GDT). In case of an addendum the observation sub id should be ADT.

3.2. text

Procedure description

5. Observation Value

Report content. If OBX-2 = TX this will correspond to a line in the report. If OBX-2 = FT this field will contain the entire report - \.br\ will be used to indicate a new line. If OBX-2 = RP this field will contain the file location where the report document resides.

11. Observation Result Status

Supported values: F(final), P (preliminary), S (partially validated), C (correction), D (delete). Remark: for addenda only F (final addendum) is supported !
