About this Conformance Profile

HL7 ORM interface that sends order information (order updates, status updates, new orders) to a 3rd party system.

The interface uses the HL7 MLLP protocol with normal ack mode (enhanced ack is not supported).

The segments, fields, components marked as Required in this profile will always be filled (non empty) by the Agfa RIS.

Segments, fields, components marked as Optional can be present in the message if the data is available in the Agfa RIS database.

Segments, fields, components marked as Not Supported will not be populated in the message.

For more information on HL7 conformance profiles please consult HL7 ANSI standard chapter 2 and HL7 Implementation/Conformance Technical Committee documents at <http://www.hl7.org/special/committees/ictc/docs.cfm>

1. Order Control

The value of this fields depends heavily on how the interface was setup. 1. Used as status update interface from RIS towards Order Placer (IHE Filler Order Management) (Parameter UseAsOrderPlacerORM = 1) * When an order is created in RIS the field will contain "SN" (send number). The order placer system is expected to assign an order placer id and send a ORM message with control code NA (number assigned) to RIS * In case of a pure status update the field will contain "SC" * When the procedure was modified the field will contain "RU" * When another field of the order was updated the field will contain "XX" * When the order was canceled in the RIS the field will contain "OC" 2. Used to inform a 3rd system of orders created/updated in RIS (Parameter UseAsOrderPlacerORM = 0) * When an order is created in RIS the field will contain "NW" * In case of a pure status update the field will contain "SC" * When the procedure was modified the field will contain "RU" * When another field of the order was updated the field will contain "XX" * When the order was canceled in the RIS the field will contain "CA"

5. Order Status

CA=canceled CM=completed DC=discontinued HD=on hold IP=in progress SC=in progress scheduled
 Depends on parameter MapExamStatus

7.4.1. Date/Time

Date/time the exam is performed
