1. Field Separator

This field contains the separator between the segment ID and the first real field: MSH-2. It defines the character which will be used as a separator for the entire message. Recommended value is "|" (ASCII 124).

2. Encoding Characters

This field contains four characters that represent: component separator, repetition separator, escape character and subcomponent separator. Recommended values are ^,~,\\ and & (ASCII 94, 126, 92 and 38)

7.1. Date/Time

The date/time that the sending system created the message. The format is: YYYYMMDDHHMMSS

9.1. message type

The value for this field is SIU which is system defined and fixed. The receiving system uses this to recognize the data segments or the application to which to route the message.

9.2. trigger event

The value send is S12 which is system defined and fixed. It indicates the response event type which is Insert for S12.

9.3. message structure

The structure of the message which Agfa Healthcare will always sent SIU_S12.

10. Message Control ID

The ID that uniquely identifies the message. The receiving system will use the same ID in the return acknowledgement message.

11.1. processing ID

This field is used to decide whether to process the message. Values are: D Debuggin P Production T Training
