About this Conformance Profile

Conformance profile ADT Inbound from a HIS

HL7Server5 - Release 2005.3.6

This profile describes the HL7 ADT message structure used to import patient demographics and visit data from a 3rd party HIS application.

History:

2012-15-03 - Creation

Remarks:

Segments present in the message structure, but marked as -not supported- are allowed to be present in the message, but are not processed.
The same counts for fields, components, subcomponents marked as not supported.

When messages are received via HL7 MLLP (socket) HL7Server5 processes the message before sending an acknowledgement message.

For certain events (eg A40) this can take a few seconds, so please configure the sending application to wait eg 180 seconds for an acknowledgment.

HL7Server5 only supports original mode acknowledgements, enhanced acks are not supported.

Please verify length attributes at the lowest level of detail if a field consists of components, subcomponents.

For more information on HL7 conformance profiles please consult HL7 ANSI standard chapter 2 and HL7 Implementation/Conformance Technical Committee documents at <http://www.hl7.org/special/committees/ictc/docs.cfm>

1. Field Separator

This field contains the separator between the segment ID and the first real field, MSH-2- encoding characters. As such it serves as the separator and defines the character to be used as a separator for the rest of the message. Recommended value and used by Agfa is |, (ASCII 124).

2. Encoding Characters

This field contains the four characters in the following order: the component separator, repetition

separator, escape character, and subcomponent separator. Recommended values and used by Agfa Healthcare are ^~\&, (ASCII 94, 126, 92, and 38).

3. Sending Application

This field uniquely identifies the sending application among all other applications within the network enterprise. The network enterprise consists of all those applications that participate in the exchange of HL7 messages within the enterprise. Entirely site-defined and a parameter for Agfa.

7. Date/Time Of Message

This field contains the date/time that the sending system created the message. If the time zone is specified, it is expected to be the local time zone !

9. Message Type

ADT_A53

9.3. message structure

Only used when input is hl7 v2.xml

10. Message Control ID

This field contains a number or other identifier that uniquely identifies the message. The receiving system echoes this ID back to the sending system in the Message acknowledgment segment (MSA).

11.1. processing ID

No difference in processing by HL7SERVER5 if Production or Test

12.1. version ID

Versions supported by HL7SERVER5 are 2.2, 2.3, 2.3.1, 2.4

18. Character Set

Character set has to be a subset of the Windows ANSI codepage of the pc where HL7SERVER5 is running ! e.g. ISO 8859/1 on a windows 1252 code page UTF-8 is not supported !

EVN - Event Type

- Usage: Required
- Cardinality:1..1

Seq.	Name	Type	Table	Len.	Opt.	Card.	Contents

6.1	Date/Time	NM		24	R	..	e.g. 200511070945

1. Event Type Code

If empty the value is taken from MSH-9 -1

2. Recorded Date/Time

Only used when EVN-6 Event Occurred is empty

6. Event Occurred

This field contains the date/time that the event actually occurred. For example, on a transfer (A02 (transfer a patient)), this field would contain the date/time the patient was actually transferred. On a cancellation event, this field should contain the date/time that the event being canceled occurred.

2. Patient ID

Please use PID-3 and map them using the parameters PIDDomainForCode, PIDDomainForHISCode ... to the PATIENTS.xxx columns

3. Patient Identifier List

Patient Identifier (list) which UNIQUELY identifies a single patient. The combination of components ID and Assigning Authority should be sufficient to UNIQUELY identify a patient. Each identifier occurrence (!) specified in PID-3 (combination of ID & Assigning Authority) should be globally unique.

3.4. assigning authority

Authority/System that generated the patient identifier

3.6. assigning facility

Facility in which the patient identifier was generated

4. Alternate Patient ID - PID

Please use PID-3 and map them using the parameters PIDDomainForCode, PIDDomainForHISCode ... to the PATIENTS.xxx columns

5. Patient Name

Patient name - no repetitions allowed!

6. Mother's Maiden Name

Sometimes used in France to exchange the patients maiden name

7. Date/Time Of Birth

Patient birth date - is a required field in the RIS database

9. Patient Alias

ONLY TYPE P is supported and only when COUNTRY - COUNTRY parameter is N and ApplyCountrySpecificNameRules is true

11. Patient Address

The occurrence that has an address type (PID-11-7) of P or M or blank is considered the main address and is stored in the PATIENTS table. ALL occurrences are stored in PAT_ADDRESSES.

11.1. street address (SAD)

First address line

11.1.2. street name

Subcomponent street name and dwelling number can be used if you wish to separate street and house number. Subcomponent PID-11-1-1 can be empty in that case.

11.2. other designation

If 11.1.3 (Dwelling Number) is not filled. This value is taken into account. If the value starts with a number and smaller then 15 characters, it will be used as for patients.p_straatnr column, otherwise the value will be appended to the patients.p_straat column.

11.6. country

In a multi-site environment with multiple HIS systems, make sure that each HIS is using the same code-set. Suggested to use 3 character ISO codes.

11.7. address type

In a multi-site environment with multiple HIS systems, make sure that each HIS is using the same code-set.

13. Phone Number - Home

Patients primary phone number - only the first occurrence is used !

13.1. [(999)] 999-9999 [X99999][C any text]

RIS version < 560: max length = 15. If PID 13.5 is filled. PID13.1 is ignored and only PID 13.5, 13.6, 13.7 and 13.8 are used.

14. Phone Number - Business

Additional (second) phone number

14.1. [(999)] 999-9999 [X99999][C any text]

RIS version < 560: max length = 15. If PID 14.5 is filled. PID14.1 is ignored and only PID 14.5, 14.6, 14.7 and 14.8 are used.

16.1. identifier

In a multi-site environment with multiple HIS systems, make sure that each HIS is using the same code-set.

18. Patient Account Number

Account number (billing) will be linked to the visit number (PV1-19). In a multi-site environment with multiple HIS systems, make sure that the component Assigning Authority is provided !

19. SSN Number - Patient

Social security number

21. Mother's Identifier

ID of the mother in case of a newborn

28. Nationality

In a multi-site environment with multiple HIS systems, make sure that each HIS is using the same code-set.

PD1 - patient additional demographic

- Usage: Optional

- Cardinality: 0..1

- Implementation note: Additional patient information like primary care physician

2. Patient Class

Important field ! Can be mapped to specific patient class in RIS. In a multi-site environment with multiple HIS systems, make sure that each HIS is using the same code-set.

3.1. point of care

Care unit where the patient resides. In a multi-site environment with multiple HIS systems, make sure that each HIS is using the same code-set.

3.4. facility (HD)

Facility where the patient resides - encouraged to use this field - certainly in a multi-site implementation. In a multi-site environment with multiple HIS systems, make sure that each HIS is using the same code-set.

6. Prior Patient Location

Only used for lookup of prior transfer - not stored in the database

6.1. point of care

only used for lookup of prior transfer - not stored in the database

7.1. ID number (ST)

In a multi-site environment with multiple HIS systems, make sure that each HIS is using the same code-set.

8.1. ID number (ST)

In a multi-site environment with multiple HIS systems, make sure that each HIS is using the same code-set.

9. Consulting Doctor

Stored as patient related physician - NOT linked to the visit

9.1. ID number (ST)

In a multi-site environment with multiple HIS systems, make sure that each HIS is using the same code-set.

16. VIP Indicator

If there is no value in PV1-16 or the value = "", patients.p_vip = N If patients.p_vip = TRUE (Y): The patient item VIP_INDICATOR will contain the value of the constant HL7_VIP_INDICATOR. If this constant doesn't exist, the value of PV1-16 is used

18. Patient Type

In a multi-site environment with multiple HIS systems, make sure that each HIS is using the same code-set.

19. Visit Number

Required field for Agfa RIS when exchanging visit information Identifier generated per patient stay in a facility. In a multi-site environment with multiple HIS systems make sure the component Assigning Authority is provided

19.4. assigning authority

Encouraged to use this component in a multi-site environment

20. Financial Class

Paymode linked to the visit - can be mapped to a QDoc paymode. In a multi-site environment with multiple HIS systems, make sure that each HIS is using the same code-set.

44. Admit Date/Time

Admission date/time

47. Total Charges

Stored as patient extra info

50. Alternate Visit ID

Can be used to uniquely identify a TRANSFERS record - requires specific parameter settings
