1 INTRODUCTION

1.1 Revision Record

Revision Number	Date	Reason for Change
1.0	April 25th, 2014	Initial version IMPAX 6.6
1.1	February 4th, 2015	Update document for IMPAX 6.6.x

1.2 Purpose and Intended Audience of this Document

This document is a HL7 Conformance Statement for the HL7 Services associated with IMPAX 6.6.x Solution.

The user of this document is involved with system integration and/or software design. We assume that the reader is familiar with the terminology and concepts that are used in HL7 2.3.1 standard and the IHE Technical Framework.

Readers not familiar with HL7 terminology should first read the appropriate parts of the HL7 standard itself, prior to reading this conformance statement.

Although the use of this conformance statement in conjunction with the HL7 standard is intended to facilitate communication with IMPAX 6.6.x, it is not sufficient to guarantee, by itself, the inter-operation of the connection between IMPAX 6.6.x and the 3rd party HL7-based system.

The integration of any device into a system of interconnected devices goes beyond the scope of the HL7 standard and this conformance statement when interoperability is desired. The responsibility for analyzing the applications requirements and developing a solution that integrates the Agfa equipment with other vendors' systems is the user's responsibility and should not be underestimated.

1.3 Version Overview

This table provides an overview of the compatibility of IMPAX PACS version with IMPAX Connectivity Manager version. This Conformance Statement applies only for the IMPAX Connectivity Manager version 2.3 and 2.4.1.

		Connectivity Manager Version			
		2.3SU2	2.4.1	2.4.1SU1	
IMPAX Version	6.6	X	X	X	
	6.6.1	X		X	

By default, all HL7 data elements correspond to HL7 v2.3.1. Connectivity Manager supports HL7 2.4 messages as long as they are conform to what is documented in the HL7 conformance statement. However, CM does not use (or need) any new functionality that was introduced in HL7 v2.4.

In case PACS Broker is used with IMPAX instead of the Connectivity Manager component, please refer to the PACS Broker HL7 Conformance Statement (number 001238) located on <http://www.agfahealthcare.com/hl7>.

1.4 Acronyms and Abbreviations

Definitions, terms and abbreviations used in this document are defined within the HL7 standard. Abbreviations and terms are as follows:

ADT	Admission, Discharge, and Transfer message
AL1	Patient Allergy Information segment
CHCS	Composite Health Care System, the RIS used by the US Military
EVN	Event Type segment
HL7	Health Level 7
IHE	Integrating the Healthcare Enterprise
MFN	Master Files Change Notification
MRG	Merge Patient Information segment
MSH	Message Header segment
NTE	Notes and comments segment
OBR	Observation Request segment
OBX	Observation/Result segment
ORC	Common Order segment
ORM	Order Request message
ORU	Observation Results - Unsolicited message
PID	Patient ID segment
PV1	Patient Visit segment
QRD	Query Definition segment
RIS	Radiology Information System
SIU	Schedule Information Unsolicited

2 INBOUND MESSAGES

2.1 Supported Trigger Events

2.1.1 Supported ADT Events

Inbound support for ADT triggers is implemented by a lookup table. This table may be edited to meet a site's needs.

Table 1 Supported ADT Events

Func Area	Event Code	ADT Trigger Event	Inbound Supported
ADT	A01	Admit a patient	Y
ADT	A02	Transfer a patient	Y
ADT	A03	Discharge a patient	Y
ADT	A04	Register a patient	Y
ADT	A05	Preadmit a patient	Y
ADT	A06	Transfer an outpatient to inpatient	Y
ADT	A07	Transfer an inpatient to outpatient	Y
ADT	A08	Update patient information	Y
ADT	A09	Patient departing	Y
ADT	A10	Patient arriving	Y
ADT	A11	Cancel admit	Y
ADT	A12	Cancel transfer	Y
ADT	A13	Cancel discharge	Y
ADT	A14	Pending admit	IHE:Y
ADT	A15	Pending transfer	
ADT	A16	Pending discharge	
ADT	A17	Swap patients	
ADT	A18	Merge patient information	Y
QRY	A19	Patient query	
ADT	A20	Nursing/Census application updates	
ADT	A21	Leave of absence – out (leaving)	
ADT	A22	Leave of absence – in (returning)	
ADT	A23	Delete a patient record	Y
ADT	A24	Link patient information	
ADT	A25	Cancel pending discharge	
ADT	A26	Cancel pending transfer	
ADT	A27	Cancel pending admit	
ADT	A28	Add person information	Y
ADT	A29	Delete person information	

Func Area	Event Code	ADT Trigger Event	Inbound Supported
ADT	A30	Merge person information	Y
ADT	A31	Update person information	Y
ADT	A32	Cancel patient arriving	
ADT	A33	Cancel patient departing	Y
ADT	A34	Merge patient information – patient ID only	Y
ADT	A35	Merge patient information – account number only	
ADT	A36	Merge patient information – patient ID and account	
ADT	A37	Unlink patient information	
ADT	A38	Cancel pre-admit	Y
ADT	A39	Merge person – external ID	
ADT	A40	Merge patient – internal ID	Y
ADT	A41	Merge account – patient account number	
ADT	A42	Merge visit – visit number	
ADT	A43	Move patient information – internal ID	
ADT	A44	Move account information – patient account number	
ADT	A45	Move visit information – visit number	
ADT	A46	Change external ID	
ADT	A47	Change internal ID	Y
ADT	A48	Change alternate patient ID	
ADT	A49	Change patient account number	
ADT	A50	Change visit number	
ADT	A51	Change alternate visit ID	

2.1.1.1 ADT Segments Processed

The following segments are processed when IMPAX 6.6.x receives an ADT message:

MSH
 [EVN]
 PID
 PV1
 [AL1]
 [MRG]
 [OBR]*

* OBR is not a segment of HL7 ADT messages, however some fields in the OBR are mapped to internal, patient related attributes, which are part of all ADT and ORM processing.

2.1.2 Supported ORM Events

The ORM^O01 is the only code supported for order messages.

Table 2 Supported ORM Events

Func Area	Event Code	ORM Trigger Event	Inbound Supported
ORM	O01	General order message	Y

2.1.2.1 ORM Messages: Supported Control Codes and Order Statuses

For ORM messages the processing performed is determined by a combination of ORC(1,1) and ORC(5,1). If ORC(1,1) is set to "SC" for "Status Changed", then ORC(5,1) is used as the key to determine both the order status. Otherwise ORC(1,1) is used as the key. The following tables indicate what order control codes and order statuses are supported by default from ORC(1,1) and ORC(5,1). This support can be changed by configuration.

Table 3 Default Order Control Codes supported from ORC 1,1

Control Code (ORC-1) Value
NW
XO
CA
OC
DC
OD
SC

Table 4 Default Order Status Codes supported from ORC 5,1

Order Status (ORC-5) Value
DC
CM
IP
CA

2.1.2.2 ORM Segments Processed

The following segments are processed when IMPAX 6.6.x receives an ORM message:

MSH
PID
PV1
[AL1]
ORC
OBR
ZDS1

2.1.3 Supported ORU Events

The ORU^R01 is the only code supported for observation messages.

Table 5 Supported ORU Events

Func Area	Event Code	ORU Trigger Event	Inbound Supported
ORU	R01	Unsolicited transmission of an observation message	Y

The ORU can be converted to DICOM SR or DICOM encapsulated PDF as of CM 2.4.1 depending on the content of the OBX segment (consult the IMPAX 6.6 DICOM Conformance Statement on <http://www.agfahealthcare.com/dicom> for more detailed information on the DICOM SR or encapsulated PDF IOD details).

2.1.3.1 ORU Segments Processed

The following segments are processed when IMPAX 6.6.x receives an ORU message:

```

MSH
PID
[ PV1 ]
{
  [ ORC ]
  OBR
  {
    [ OBX ]
  }
}

```

2.1.4 Supported MFN Events

IMPAX 6.6.x only supports procedure master file notifications from CHCS.

Table 6 Supported MFN Events

Func Area	Event Code	MFN Trigger Event	Inbound Supported
MFN	M01	Procedure master file change notification	Y

2.1.4.1 MFN Segments Processed

The following segments are processed when IMPAX 6.6.x receives a MFN message:

```

MSH
MFI
MFE
ZM1
{
  [ ZNN ]
}
{
  [ ZRF ]
}

```

2.1.5 Supported SIU Events

Table 7 Supported SIU Events

Func Area	Event Code	SIU Trigger Event	Inbound Supported
SIU	S12	Notification of new appointment booking	Y
SIU	S13	Notification of appointment reschedule	Y
SIU	S14	Notification of appointment modification	Y
SIU	S15	Notification of appointment cancellation	Y
SIU	S26	Notification that patient didn't show up for scheduled appointment	Y

2.1.5.1 SIU Segments Processed

The following segments are processed when IMPAX 6.6.x receives an SIU message:

MSH
SCH
PID
PV1
[AL1]
[ORC]
[OBR]

2.2 Supported HL7 Attributes

The following sections indicate the default mapping of HL7 attributes to internal IMPAX 6.6.x data attributes.

2.2.1 MSH Segment Mappings

Table 8 MSH Attribute Support in IMPAX 6.6.x

Seq	HL7 Field Name	Value Required	Default Mapping to IMPAX Attribute(s) (Yes/No)	Comments
1	Field Separator	Yes	Yes	Usually " "
2	Encoding Characters	Yes	Yes	Usually "~\&"
3	Sending Application	No	No	
4	Sending Facility	No	No	
5	Receiving Application	No	No	
6	Receiving Facility	No	No	
7	Date/time of Message	No	Yes	Date portion only (YYYYMMDD)
8	Security	No	No	
9	Message Type	Yes	Yes	ADT only, uses MSH 9,2 or EVN 1,1
10	Message Control ID	Yes	Yes	Generated by sending application
11	Processing ID	Yes	Yes	
12	Version ID	Yes	Yes	"2.3", "2.3.1", "2.4", "2.4.1"
13	Sequence Number	No	No	
14	Continuation Pointer	No	No	
15	Accept Acknowledgement Type	No	No

2.3 Acknowledgements

The HL7 mapping returns a **NAK** if the incoming message cannot be processed. If the reason is the message type is not mapped, the Acknowledgment Code is set to “**AR**”. Any other parsing error returns an Acknowledgment Code of “**AE**”.

3 OUTBOUND MESSAGES

3.1 General Processing Rules

The default outbound mapping is generally the inverse of the HL7 inbound mapping.

3.2 Outbound Message Types Supported

3.2.1 HL7 Message Type, Event Mappings

The following table lists all of the default outbound HL7 messages supported. There is no single set of mappings that will service all IMPAX 6.6.x installations, so this table will likely be edited when the device is installed. The default mappings are the inverse of the inbound HL7 to IMPAX 6.6.x.

ORU	R01
MFN	M01

3.2.2 Segments Processed

The following table lists the segments that are processed for each HL7 message type within the default HL7 Out TCL scripts.

Table 25 HL7 Out Segments Processed

HL7 Message Type	Segments Produced
ADT	MSH PID PV1 [AL1]
ADT Merge messages add:	MRG
ORM	MSH PID PV1 [AL1] ORC OBR ZDS1
ORU	MSH PID PV1 [AL1] { ORC OBR { [OBX] } }
MFN	MSH MFI MFE ZM1 { [ZNN] } { [ZRF] }

By default, all HL7 data elements correspond to HL7 v2.3.1. Connectivity Manager supports HL7 2.4 messages as long as they are conform to what is documented in the conformance statement. However, CM does not use (or need) any new functionality that was introduced in HL7 v2.4.

3.3 ADT (Admission, Discharge, and Transfer)

19	Principal Language of Message	No	No	

- (1) The field separator and encoding characters cannot be changed through script or grammar changes.
- (2) These attributes come from the *configuration* object and can be set when the device is configured using the service tool.
- (3) This field's value comes from a lookup that maps an internal event type to the HL7 type and event code. If this lookup fails, no more mapping occurs and no HL7 message is generated. If the lookup succeeds, the result is potentially refined by another lookup using a second internal attribute.
- (4) The message control ID is a sequential number. When the device starts, the initial value of the control ID is set to the number of seconds since January 1, 1970.
- (5) These two values are constants found in the mapping table used to generate the MSH segment and can be changed by editing the grammar.

3.4 Order Entry

3.4.1 Order Mappings

For order messages, a lookup of the order control and order status values is attempted based on internal order status attributes. The first lookup that produces a non-empty string is used for the ORC(1,1) or ORC(5,1) value. If none of these lookups results in a non-empty string, no HL7 message is generated.

4 QUERIES

4.1 Query

IMPAX 6.6.x translates an internal report/ result query message into an HL7 QRY^Q01 message. This is an “original mode” query.

4.1.1 Query–MSH Segment

IMPAX 6.6.x creates the MSH segment of this message in the same manner as for other outbound messages. See 3.3.1, MSH Segment.

4.1.2 Query–QRD Segment

The following table describes how IMPAX 6.6.x creates the QRD segment of the query message.
