About this Conformance Profile

US Specific XML Billing - HL7 DFT - Release 2005.3.3

This profile describes the DFT^P03 message structure used to send billing information from Agfa Impax RIS to a charge processor.

This document is valid for technical and professional billing.

The trigger for creating a technical billing message is changing the exam status to F(inished) in QDoc.

When a procedure that had status F is (re)set to another status an undo billing (credit) tech billing event is generated.

The trigger for creating a professional billing message is the validation of the request in QDoc.

For more information on HL7 conformance profiles please consult HL7 ANSI standard chapter 2 and HL7 Implementation/Conformance Technical Committee documents at <http://www.hl7.org/special/committees/ictc/docs.cfm>

Conformance parameters

Message Profile

- HL7 Version: 2.4

2. Patient ID

Only for backwards compatibility - Please use PID-3.

3. Patient Identifier List

Depending on the configuration of the DFT Billing interface, one or multiple patient ID's can be sent in PID-3.

3.8. expiration date

! In use from release 2005.2.0 ! YYYYMMDD Parameter: IncludeExpiredIdentifiers Only included if IncludeExpiredIdentifiers = 1 and expiration date is a valid date

4. Alternate Patient ID - PID

For backwards compatibility only

8. Administrative Sex

fixed values: 'M', 'F', or 'U'

13.1. [(999)] 999-9999 [X99999][C any text]

Phone number - If available

14.1. [(999)] 999-9999 [X99999][C any text]

Second phone number - if available

PV1 - Patient visit

- Usage: Required but may be empty
- Cardinality: 0..1
- Implementation note: The PV1 segment in a DFT message is mainly used to transfer the admission number to which the billing data is linked to. Remark that the admission number will only be sent when it is properly linked to the validated request for which the DFT message is generated. Whether the admission number is linked to the request is dependant on the HL7 ADT interface and application setup for patient admission data.

2. Transaction ID

For Exams : <E> + <Internal unique number for the examination> For Products: <P> + <Internal unique number for that product within the request> For Advanced payments: + <Internal unique number for the advanced payment>

3. Transaction Batch ID

Unique number of the validated request in Qdoc.

4.1. Date/Time

For exams, the date/time stamp of execution of the exam is filled in this field. For Products and advanced payments, the date & time of the request is filled in this field.

5.1. Date/Time

For all types of FT1 segment, the creation date/time of the HL7 DFT message is filled in this field. This is the moment that the billing interface has been performed.

6. Transaction Type

Technical billing: CG when the exam is set to F. CD when the exam status is changed from F to something else. Professional billing: CG when validating a request. CD on undo validation of a request (depending on parameter). AJ in case of a resend.

7. Transaction Code

By default, the billing code linked to an examination code is sent in this field. However, depending on the configuration of the interface, the accession number, or the exam code or an internal unique key for the exam can also be sent in FT1-7. for Products, the Product code as known in Agfa RIS will be sent in this field.

8. Transaction Description

For exams: the QDoc exam status code For products and payments: not used

10. Transaction Quantity

For exams: fixed value: '1' (1 exam is always treated in 1 transaction) For products: number of units

11. Transaction Amount - Extended

By default, no prices are sent in the DFT interface. Price calculation is the responsibility of the charge processor that receives Billing codes from the order filler.

12. Transaction Amount - Unit

By default, no prices are sent in the DFT interface. Price calculation is the responsibility of the charge processor that receives Billing codes from the order filler.

12.1.1. quantity

For exams: the price of 1 exam, without supplements. For products: the price of 1 product, without supplements. For payments: same amount as filled in FT1-11 in this segment. total of gbpseudonominlij.n.hon, total of ggbet_factuur.bedrag When value should be 0 it is replace with blancs

13.1. identifier

The performing department to which the validated request is linked to is filled in this field.

14. Insurance Plan ID

The paymode (payment regime) that is linked to the request is sent in this field. The value is dependent of the payment regimes setup in QPlanner, and the use of Payment regimes in the request in

17. Fee Schedule

The value NWF from the exam in Qdoc if filled in this field. By default, the value S is filled in this field. NA is sent when the value of the NWF field is N WE is sent when the value of the NWF field is W NW is sent when the value of the NWF field is F

18. Patient Type

For all: patient type that is filled in the request in QDOC gbprestatiegroep.patttype

19. Diagnosis Code - FT1

List of ICD9-CM or ICD10-CM diagnostic codes

20. Performed By Code

For exams and products: performing physician For payments: NOT filled

21. Ordered By Code

The requesting physician will be filled in this field.

23. Filler Order Number

For examination, the unique number of the request will be filled in this field. For products and advanced payments, this field will be blank.

24. Entered By Code

For all: the login code of the user that created the request in QDoc.

25. Procedure Code

CPT4 code and (optionally) CDM code

25.1. identifier

CPT4 code

25.4. alternate identifier

CDM code

25.5. alternate text

CDM code label

26. Procedure Code Modifier

CPT modifier and (optionally) CDM code. If a final report exists (made by a resident) a GC modifier is

added automatically.

26.1. identifier

CPT modifier code

26.4. alternate identifier

CDM code

26.5. alternate text

CDM code label

Segment group: FINANCIAL PROCEDURE - FINANCIAL.FINANCIAL PROCEDURE

- Usage: Required but may be empty
- Cardinality:0..*

PR1 - Procedures

- Usage: Not supported

DG1 - Diagnosis

- Usage: Optional
- Cardinality: 0..1
- Implementation note: DG1 segments can be added after each FT1 segment. These segments represent the diagnostic codes that are linked to the Item Numbers (PR1). The diagnostic codes attached directly on examination are also available here.

Seq.	Name	Type	Table	Len.	Opt.	Card.	Contents
1	Set ID - DG1	SI		4	R	1..1

19	Attestation Date/Time	TS		26	O	0..1	

1. Set ID - DG1

Incremental Counter, starts at 1 and is unique for all DG1 segments.

3.1. identifier

The diagnostic code (compliant with the Diagnosis Coding Method that is used).

3.2. text

Descriptive text for the diagnostic code.

3.3. name of coding system

The possible diagnosis coding methods are listed in the QManager parameter:

DIAG_TYPE/LINKTOBILLINGCODE

4. Diagnosis Description

Descriptive text for the diagnostic code.

5.1. Date/Time

YYYYMMDDHHMM The date/time stamp of execution of the exam is filled in this field.

6. Diagnosis Type

fixed value: 'F'

End of segment group FINANCIAL_PROCEDURE

End of segment group FINANCIAL

DG1 - Diagnosis

- Usage: Optional

- Cardinality:0..*

- Implementation note: Global DG1 segments can be added across all FT1 segments. These segments represent the diagnostic codes that are linked directly on the validated request.
