## 1.1 Revision Record

Revision Number	Date	Reason for Change
1.0	July 7, 2016	Initial version

## 1.2 Purpose and Intended Audience of this Document

This document is a HL7 Conformance Statement for the HL7 Services associated with Agfa HealthCare IMPAX Data Center 3.1.1, further referred to as IDC 3.1.1.

The user of this document is involved with system integration and/or software design. We assume that the reader is familiar with the terminology and concepts that are used in HL7 2.3.1 and HL7 2.5 standard and the IHE Technical Framework.

Readers not familiar with HL7 terminology should first read the appropriate parts of the HL7 standard itself, prior to reading this conformance statement.

Although the use of this conformance statement in conjunction with the HL7 standard is intended to facilitate communication with IDC 3.1.1, it is not sufficient to guarantee, by itself, the inter-operation of the connection between IDC 3.1.1 and the 3rd party HL7-based system.

The integration of any device into a system of interconnected devices goes beyond the scope of the HL7 standard and this conformance statement when interoperability is desired. The responsibility for analyzing the applications requirements and developing a solution that integrates the Agfa equipment with other vendors' systems is the user's responsibility and should not be underestimated.

## 1.3 Version Overview

IDC 3.1.1 has HL7 connectivity integrated within the product. Therefore there is no version compatibility matrix.

### 2.1.1.1 ADT Segments Processed

The following segments are processed when IDC 3.1.1 receives an ADT message:

MSH  
 [ EVN ]  
 PID  
 PV1  
 [ MRG ]

## 2.1.2 Supported ORM Events

The ORM^O01 is the only code supported for order messages.

**Table 2 Supported ORM Events**

Func Area	Event Code	ORM Trigger Event	Inbound Supported
ORM	O01	General order message	Y

### 2.1.2.1 ORM Messages: Supported Control Codes and Order Statuses

For ORM messages the processing performed is determined by a combination of ORC(1,1) and ORC(5,1). If ORC(1,1) is set to "SC" for "Status Changed", then ORC(5,1) is used as the key to determine both the order status. Otherwise ORC(1,1) is used as the key. The following tables indicate what order control codes and order statuses are supported by default from ORC(1,1) and ORC(5,1). The set of supported control codes and the corresponding handling behaviour can be changed by configuration.

**Table 3 Default Order Control Codes supported from ORC 1,1**

### 2.1.2.2 ORM Segments Processed

The following segments are processed when IDC 3.1.1 receives an ORM message:

```

[ PV1 ]
{
  ORC
  [ OBR ]
  [

## 2.3 Acknowledgements

If the HL7 message is processed successfully, then an ACK is returned with the Acknowledgement Code set to "AA".

If the incoming message cannot be processed, the HL7 mapping returns a **NAK**. If the reason is the one of the required fields or segments in the message is missing, the Acknowledgment Code is set to "**AR**". Any other parsing error returns an Acknowledgment Code of "**AE**".

## 3 OUTBOUND MESSAGES

### 3.1 Forwarding of HL7 Messages

IDC 3.1.1 can be configured to forward any received HL7 messages to one or more destination. By default, the message will be forwarded 'as is', including retaining the Sending Application and Facility and Receiving Application and Facility in MSH segment. Optionally, a mapping can be applied when forwarding a message.

### 3.2 Outbound HL7 Notifications

IDC 3.1.1 can be configured to trigger HL7 notifications to one or more destinations. The HL7 notifications are generated based on a configurable mapping.

#### 3.2.1 Study Available HL7 Notification

The following segments are generated when IDC 3.1.1 sends a study available HL7 notification or study unavailable HL7 notification:

MSH  
PID  
ORC  
OBR  
OBX  
ZDS

The following sections define the default mapping of the HL7 notification.
