

Introducing AGFA HealthCare Imaging Health Network™

That's life in **flow**.

AGFA 
HealthCare

AGFA HealthCare's technologically sophisticated platform will enable healthcare systems to work effectively across geographies for optimal continuum of care.

From interpreting cardiology scans of a skier felled in Utah, to a remote surgical consultation from Chicago, to follow-up care in London, for a Radiologist and Cardiologist – and a patient – timely care is important. AGFA HealthCare Enterprise Imaging innovations will speed confident care across town and across the globe by providing the ability to curate multimedia patient history and delivering easy access to the comprehensive patient imaging record.

AGFA HealthCare Enterprise Imaging's networked healthcare will

- ✓ **Empower rapid growth initiatives, improve physician knowledge and enhance care delivery** through a multi-entity shared community health imaging record, an **AGFA HealthCare Imaging Health Network™ (IHN)**, where studies, regardless of use or location, are no more than a few seconds away.
- ✓ **Expand service geography, stop moving data, and scale easily** by utilizing modern zero-footprint, node-based web-streaming technology with **Streaming Client**.
- ✓ **Maximize efficiency and capacity for busy clinicians**, create fairness, and break silos of clinical expertise by intelligently distributing work across diagnosticians, enterprise wide, with **built-in workflows**.

Patients will benefit from the Imaging Health Network™

- The **IHN** will break silos and create genuine enterprise imaging across the diverse landscape of providers because each contributing provider publishes its portion of the patient journey to the IHN. Along the entire continuum of care, your informed physicians gain easy access to the patient's cross-provider imaging record. Your patients will benefit from the curated multimedia patient history your IHN creates.
- Patients want the right Radiologist reading their studies, not “just the local radiologist who happens to be at this facility today.” By using the advanced AGFA EI Orchestration engine across the entirety of the network, your practice will match the specific study with the most appropriate Radiologist based on skill and availability.

Imaging Health Network will enable Physician Flow and Efficiency

When physicians access the AGFA EI Imaging Health Network, three flow-producing characteristics will be immediately realized:

- 1 **The contextual, curated patient imaging record**, including contributions by affiliated organizations, is **quickly and directly accessible** within the EHR.
- 2 **Imaging display is delightfully fast**, without calling for assistance or waiting for uploads.
- 3 **Peer-to-peer collaboration is only a couple of clicks away**, working cross-organizationally, and on any device.
