

Enterprise Imaging Streaming Client

Connected Like Never Before

That's life in **flow**.

AGFA 
HealthCare

Introducing Streaming Client in AGFA HealthCare Enterprise Imaging – a groundbreaking leap forward for health systems.

Experience a new era of patient care where diagnoses are made faster and confidence soars. With this web-based technology, AGFA EI makes images available in near real-time, empowering all members of the care team to work seamlessly together.

AGFA HealthCare Streaming Technology

Streaming is more than a feature — it's a new way of thinking about imaging.

Say goodbye to routing data to different systems and welcome streaming technology that brings the user directly to the information requested. Experience a super-fast display of even the largest studies - all within near real-time.

Utilizing the [Imaging Health Network™ \(IHN\)](#), images are broadcasted to users from a centralized and/or node distributed streaming network without the need for multi-hop routing to the end user.

[AGFA HealthCare Enterprise Imaging](#) is designed for collaboration. In one system, radiologists, cardiologists, and more can do everything. From reading and interpreting images to diagnosing patients, it's all happening in one place.

Even better: This work can take place on any device that has an Internet connection.

Working at home, in the clinic, or out of town? Distance doesn't matter with Streaming. Break free from geographic constraints and open a bigger pool of caregivers to support patient care across affiliate organizations and beyond.

For Health Professionals

- **Access studies seamlessly** without the challenge of fetching or moving them
- Witness the same high-quality experience of a high end clinical machine on virtually **any device**
- Perform **remote reading** from virtually anywhere, allowing flexibility
- **Collaborate in real-time** with other members of the care team
- Feel confident that AGFA HealthCare Enterprise Imaging will display any image from any affiliated storage location within the **Imaging Health Network™**
- Access studies virtually **anywhere** with the click of a button

For IT Professionals

- Experience true **zero-footprint** application – No downloads. No installs. No plugins.
- Significantly **reduce IT infrastructure** demands
- **CPU-based rendering** eliminates the need for expensive GPU servers or client-side GPUs
- Dramatically **reduce IT costs** related to client management, installations, and downloads
- **Eliminate slowdowns** from integrations and enable affiliates everywhere
- **Save time** supporting applications with many use cases on one application
- Free up valuable time for developing **IT strategies** that align with business goals

Speed counts, especially in the most critical situations.

Let's take the example of a child who is brought into a community hospital with a severe head injury. With [AGFA HealthCare Enterprise Imaging](#) in place, the emergency physician can quickly consult a pediatric neurosurgeon to review the image and provide vital information that helps the local team prepare for lifesaving surgery.

Enterprise Imaging Streaming Client is bringing the care community closer than ever.

The introduction of streaming is the next step in creating a one-of-a-kind community of care: an [Imaging Health Network™ \(IHN\)](#). This approach to interconnected care serves as a catalyst to business, clinical, and professional growth across the entire health system – regardless of location, time of day, or type of device.

Ready to unlock the future of patient care?
