

👍 I can confidently say, AGFA is the most efficient system we've had.

Dr. David Rosenblum
Chairman, Akron Radiology
Incorporated

Dr. David Rosenblum of Akron Radiology Incorporated supports imaging services across the greater Akron area. In this environment, turnaround time is everything. Patients are waiting for results, and clinicians rely on being efficient and getting the job done right. Here's what Dr. Rosenblum had to say:

We're using AGFA because it was clearly the best system for us. It's extremely efficient, very fast at getting us the information we need to see the images, and it's reliable. It stays up more than other systems I've used in the past. Having worked with other platforms at different organizations, I can confidently say this is the most efficient system we've had.

But it's not just the platform — it's the service.

AGFA provides training experts who work directly with our physicians. There are modules available so we can learn from experts and better understand

the tools. That support makes a real difference in how quickly and effectively we can work.

We've built a collegial relationship with AGFA. When we have issues, they respond right away. They're friendly, helpful, and genuinely care. We're in touch with someone from AGFA on a monthly basis. They're persistent and responsive to our needs.

They even worked with us to create a peer learning section within the system, allowing us to configure it the way we wanted. We were able to consolidate applications we previously used from other vendors and bring them into the PACS system. That digital platform gives us space to communicate, learn from each other, and reduce mistakes — while also creating learning opportunities for technologists.

That partnership has been incredibly helpful for our practice.

That's life in **flow**.
